

D20

Single-component, water-based primer (such as **D20**) formulated for use mainly on plasters and levelling compounds to improve the adhesion and durability of the coloured finish to be applied subsequently. By penetrating into the substrate, it guarantees the adhesion of the layers applied subsequently. Applicable also on dusty substrates. Also suitable for dusty substrates as it encapsulates the dust. Minimum required characteristics: Water vapour permeability $S_d = 0,43 \text{ m}$; Solids content 10%.
